Vulnerability Management-as-a-Service

Security flaws and misconfigurations no longer a weakness.

ASSURA™
Cybersecurity uncompromised.

The power of actively identifying and managing vulnerabilities.

One of the most common means that threat actors use to compromise your security is taking advantage of systems with lingering security flaws and weak configurations. With Assura's Vulnerability Management-as-a-Service (VMaaS), you keep the bad guys from finding and exploiting those weaknesses, in addition to ensuring compliance with all industry standards. VMaaS includes ongoing vulnerability scans, detailed vulnerability reports, a guided explanation of what it all means, and more.

Assura's VMaaS has two service options:

BASIC

- Vulnerability scans with industry-leading tools
- All vulnerabilities reported into our unified vulnerability management platform for remediation assignment and status tracking
- Each vulnerability is enriched by Mandiant Advantage vulnerability intelligence so you know whether it's being used by real attackers
- Receive risk-based remediation guidance from our experts to prioritize most immediate needs first

ADVANCED

Get all the goodness of Basic in addition to:

- Scans to assess compliance with major standards such as HIPAA, PCI DSS, and Center for Internet Security benchmarks
- Compliance and vulnerability scanning of workloads in AWS, Azure, and GCP
- Integrations with over 100 scanners and external tools for unified vulnerability management
- Integration with major service desk platforms
- Compliance with all applicable industry standards

Not just reports dumped over the wall.

Each VMaaS client is assigned a dedicated Service Concierge from our Offensive Security Operations team. Your expert will facilitate a monthly conference to highlight trends and make treatment recommendations. These added insights provide you with an "attacker's eye view" of your attack surface.

FEATURES

	BASIC	ADVANCED
Identify vulnerabilities powered by Tenable.io	✓	✓
Vulnerability management and automation portal	✓	✓
Exploitability data enriched with Mandiant vulnerability intelligence	✓	✓
Risk scoring contextualized based on CVSS score, exploitability, and system criticality	✓	✓
Integration with major service desk platforms	✓	✓
Notifications to Teams, Slack, Email, Webhooks, and SMS	✓	✓
Dashboard and Analysis	✓	✓
Monthly reporting conference with Concierge from Assura's Offensive Security Operations team with guidance on remediation	✓	✓
Full integration with Assura's Virtual ISO service	✓	✓
Compliance audits with major frameworks such as PCI DSS, HIPAA, and CIS Benchmarks		✓
Integration with over 100 different products including asset management, bug bounty, and application security products		✓
Initial and semi-annual asset discovery scans that can be imported into organization's CMDB		✓
SAML Single Sign-on (SSO)		✓
Add PCI DSS scans from Approved Scanning Vendor		✓
